Noise Complaints	5

JULY SUMMARY

During July 2008, the airport office received 132 noise related calls from individuals in the surrounding communities. All 132 of those calls were complaints regarding flight operations. 41 (or 31%) of the complaints were filed by 3 individuals.

Noise calls are received via telephone hotline (425-353-2110 x1) or through the airport web page noise complaint form (www.paineairport.com/noise/noiseform.html).

Upon receipt, all complaints are investigated. The FAA retains radar data for 3 days before providing it to the airport's AIRSCENE noise monitoring system. Airport staff uses the AIRSCENE data and other sources to help identify which operation generated the complaint. The operator is notified of the complaint and made aware of the airport's noise abatement program. Callers who specifically request to be contacted are called back. The monthly noise summary is posted online at www.paineairport.com/noise/noisesummary.html the fourth week of the following month.

Caller Identification Codes are found on page 3 to identify the individuals who made each call.

First time callers will be notified of their new ID # by phone or email.

Some of the aircraft events listed on page 3 are presumed to have originated and/or completed their flight at an airport other than Paine Field.

After the individual complaint listings you will find a graphic representing the 16 noise sub-quadrants located around Paine Field. The graphic also depicts where Paine Field's three noise monitors are located.

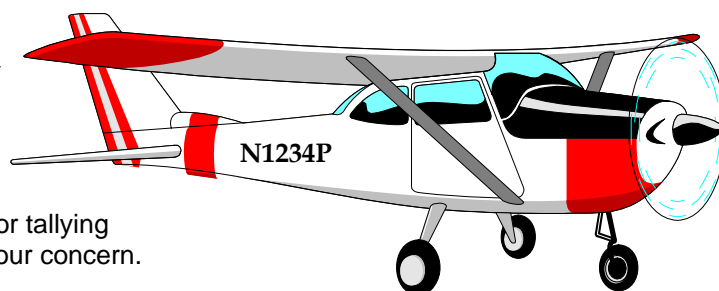

In addition to this monthly noise report, you will find a copy of Snohomish County Airport's monthly tenant newsletter, *Paine Field Happenings*. The newsletter is sent to all airport tenants and users and is also found on our website at: www.paineairport.com/appenings/Happenings.html.

RECORDING NOISE COMPLAINTS

Your noise calls are important to us. If there are flight operations taking place which are not ordinary such as very low altitude operations, or repetitive overflights by jets, please do call in. However, if you see an ordinary aircraft taking off or landing, which seem to be abiding by reasonable standards, please be aware that the airport is here to accommodate aircraft. The airport is not collecting or tallying data to be used for any other purpose other than tracking your concern.

In filing a noise complaint, please state your name, address, phone number, **Email &** information pertaining to your concern. For those who have filed a noise complaint before, it is okay to just state your full name. The more complete your information, the better the chance of it being helpful in identifying the aircraft.

To help identify small propeller aircraft, please give a description of the aircraft (i.e. color, high-wing or low-wing, number of engines, and if possible please provide it's "N" number.) with the "N" number of N1234P.

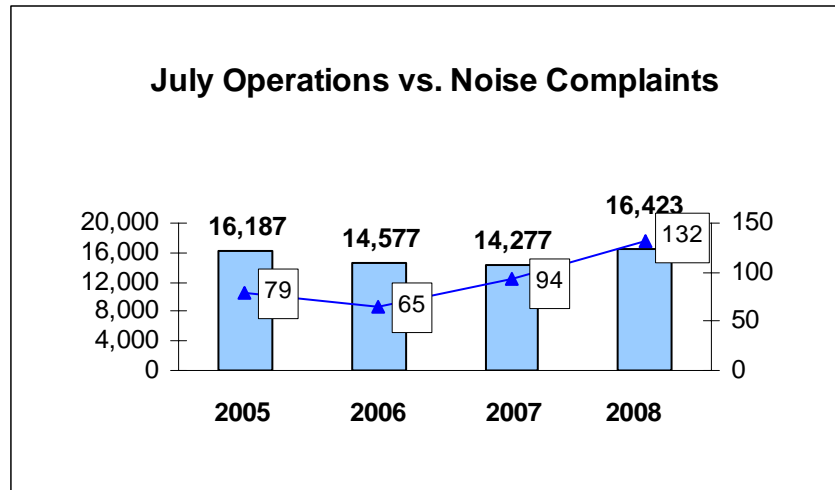

JULY 2008 MONTHLY FLIGHT

During July 2008, the FAA Paine Field Air Traffic Control Tower recorded 16,423 flight operations. This is a 15% increase in operations from July 2007, which had 14,277 operations.

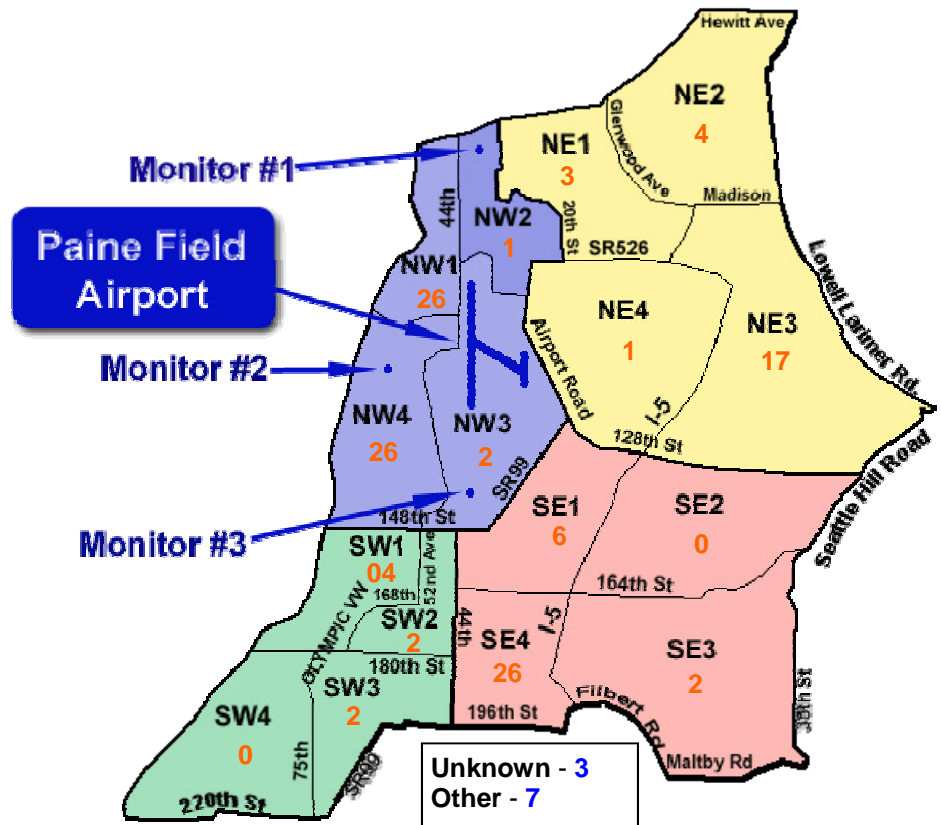

The four-year average number of flight operations for the month of July is 15,366. Total operations for July 2008 are 7% above the four-year average.

The graph shows operations compared to number of noise complaints for the years 2005, 2006, 2007 and 2008 during the month of July.

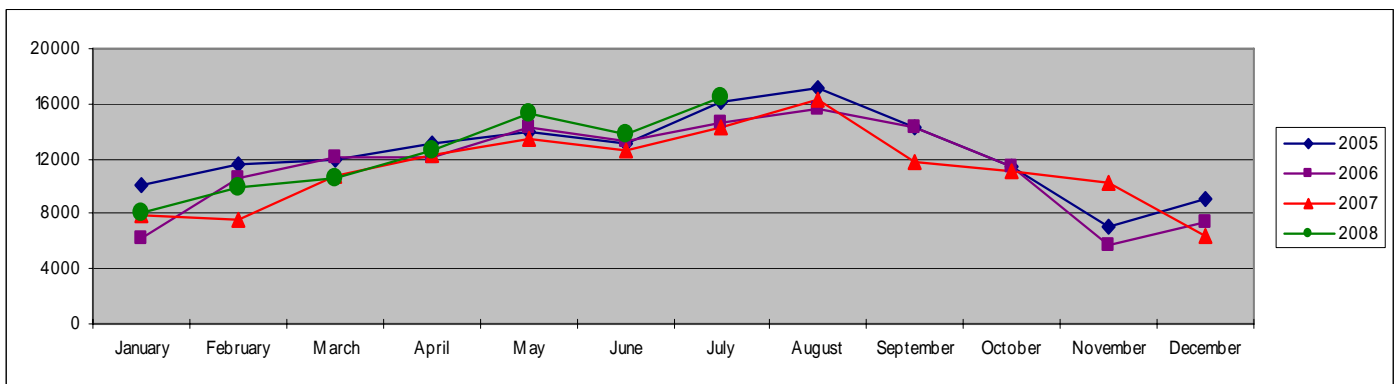

NOISE QUADRANTS

The graphic on the right depicts Paine Field's 16 noise quadrants and the locations of the three noise monitors. The blue numbers within each quadrant represent how many calls were made from that quadrant in the month of July. "Unknown" represents complaints where the caller's quadrant was not identified. "Other" represents complaints from outside the four quadrants.

MONTHLY OPERATIONS LEVELS 2005—2008
